

CHAINLESS X2500

HUSTLER®

Rethinking the Everyday

Introducing Hustler's all new Chainless X2500, the 3 Point Hitch mounted model which utilises the same feeding system that has been proven on thousands of farms with the Chainless X5000.

NEW CURVED PLATFORM

Tested on the market for the stickiest of Alfalfa bales, the Polyethylene bed is slippery and the new shape helps to break apart the biscuits better.

ENCLOSED CHAMBER

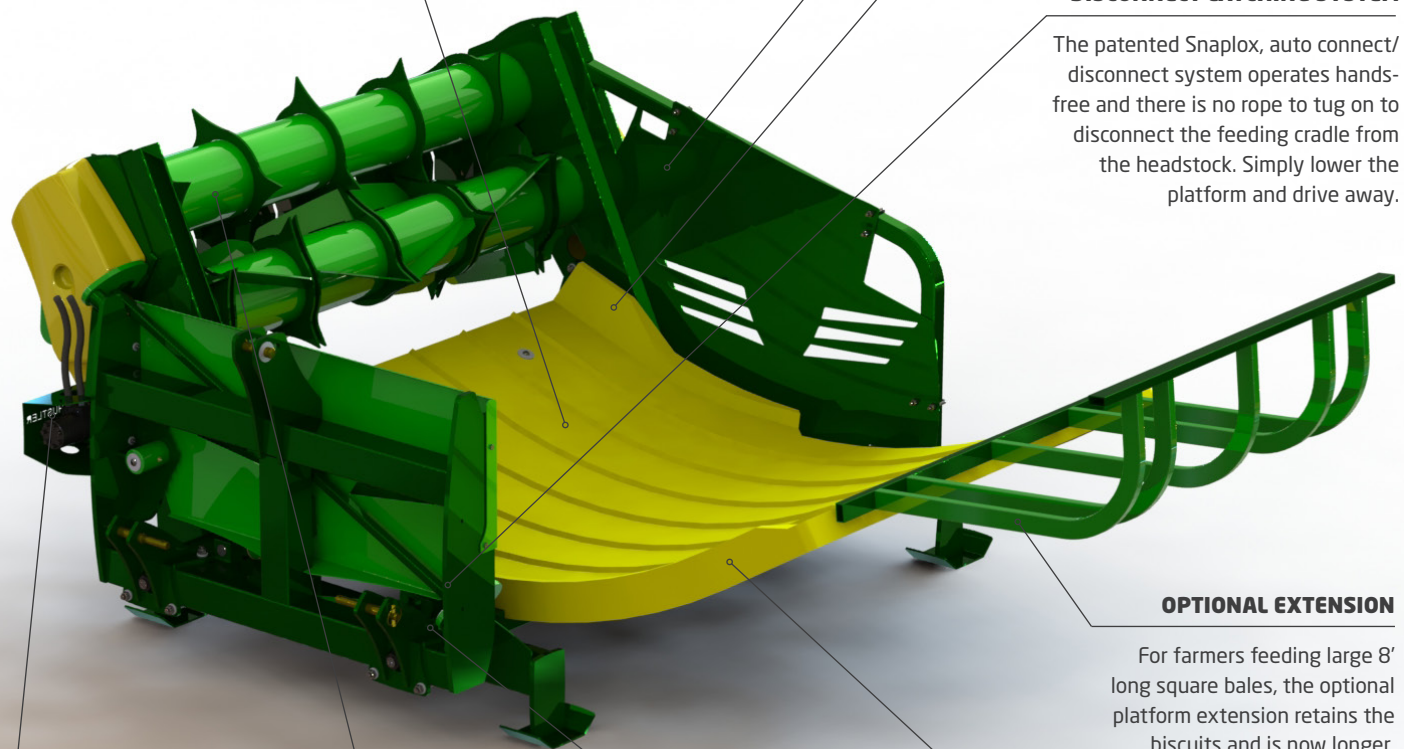

The enclosed front and rear chamber reduces the chance of hay falling out the back or front and reduces waste.

NEW PLATFORM ADJUSTMENT

The new adjustable platform provides more flexibility of operation, and easier use on a wider variety of bales.

SNAPLOX AUTO CONNECT/DISCONNECT LATCHING SYSTEM

The patented Snaplox, auto connect/disconnect system operates hands-free and there is no rope to tug on to disconnect the feeding cradle from the headstock. Simply lower the platform and drive away.

OPTIONAL EXTENSION

For farmers feeding large 8' long square bales, the optional platform extension retains the biscuits and is now longer.

STRONGER DRIVE SYSTEM

The new Drive Dog system utilises two heavy duty bearings instead of bushes, which lasts longer and provides more rigidity.

PROVEN ROTOR DESIGN

Same new Helix drums and Hypaflow wiper panel, that has been well proven on the Chainless X5000 on more than 110 different types of bales.

BOLTED HITCH MOUNTS

Gives you more flexibility, replace them with skid-loader brackets for front mounted loader flexibility, reach and visibility.

BUILT TOUGHER

Rated to handle 1250kg /2750lb bales with ease, the new model is much stronger.

SELF-LOADING IS QUICK, SAFE AND EASY AND THERE'S NO NEED TO TUG ON A ROPE!

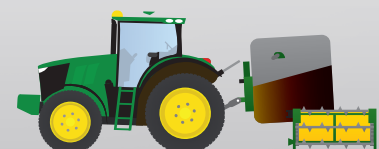

www.hustlerequipment.com

1. Lower feeder to the ground and drive away

2. Spear bale with tynes and position over feeder

3. Remove wrapping, and reconnect to feeder
